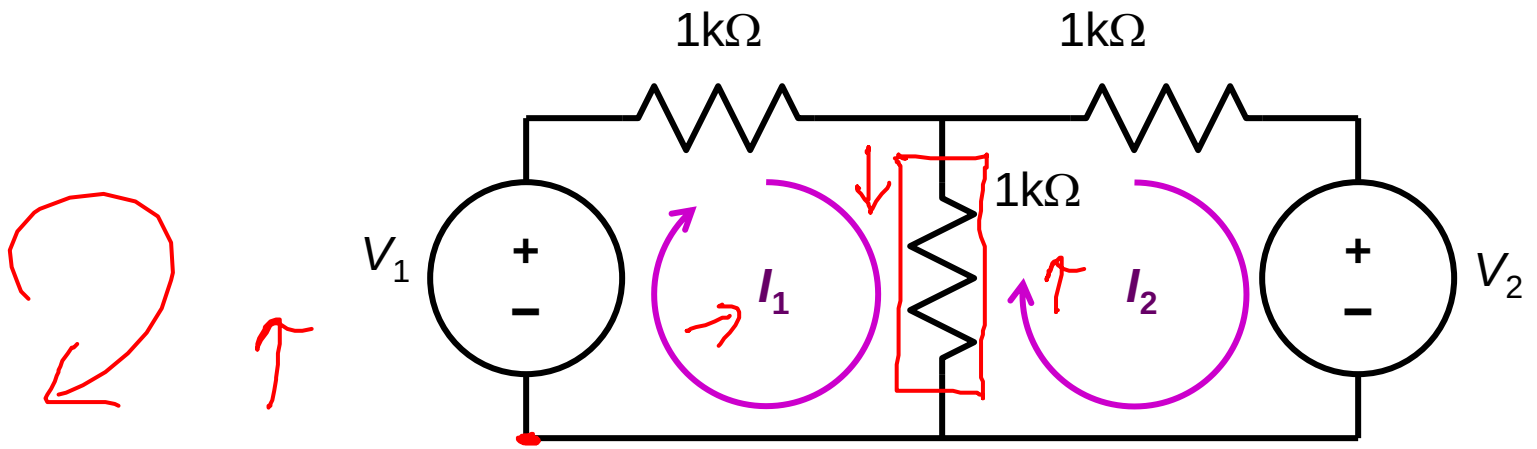
Steps of Mesh Analysis

1. Identify mesh (loops).
2. Assign a current to each mesh. → clockwise
3. Apply KVL around each loop to get an equation in terms of the loop currents.

   V = IR → Resistors → drop
4. **Solve the resulting system of linear equations for the mesh/loop currents.**

3. KVL Around Mesh 1

$+V_1 - I_1\,(1k) - (I_1 - I_2)\,1k = 0$



I_1 I_2

$(I_1 + I_2)$

$$+V_1 - I_1\,1k\Omega - (I_1 - I_2)\,1k\Omega = 0$$

$$I_1\,1k\Omega + (I_1 - I_2)\,1k\Omega = V_1$$

$$I_1\,2k\Omega - I_2\,1k\Omega = V_1$$

3. KVL Around Mesh 2

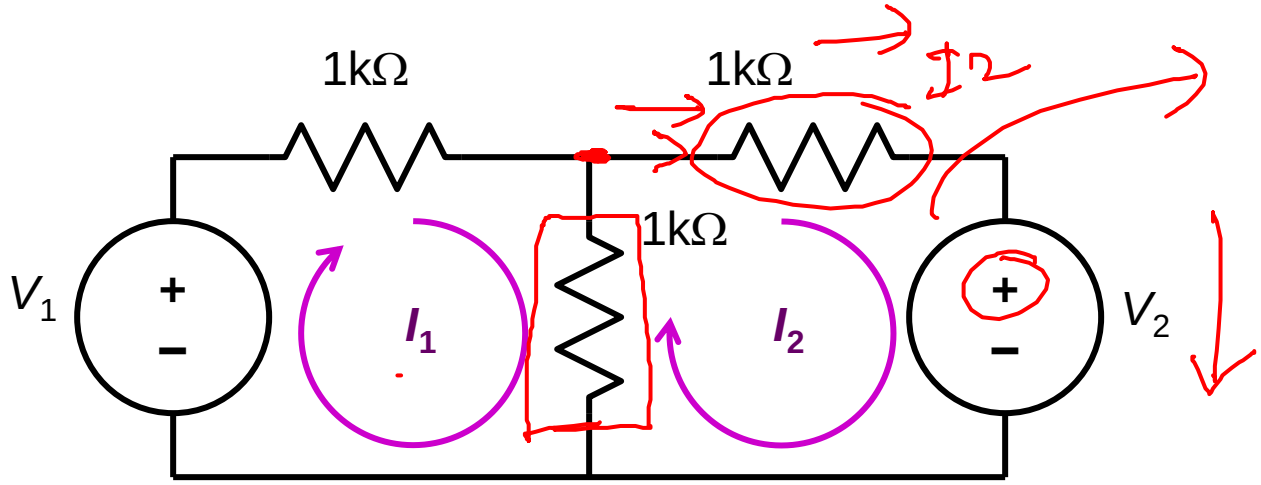
$V = I\,R$

$-I_2(1k) - V_2 - 1k(I_2 - I_1) = 0$

$V_1 = 7V$

$V_2 = 4V$

I_1 & I_2



$$-(I_2 - I_1)\,1k\Omega - I_2\,1k\Omega - V_2 = 0$$

$$(I_2 - I_1)\,1k\Omega + I_2\,1k\Omega = -V_2$$

$$-I_1\,1k\Omega + I_2\,2k\Omega = -V_2 \quad (2)$$

$$I_1(2k) - I_2(1k) = V_1 \quad (1)$$

4. Solving the Equations

Let: $V_1 = 7V$ and $V_2 = 4V$

Results:

$$I_1 = 3.33 \text{ mA}$$

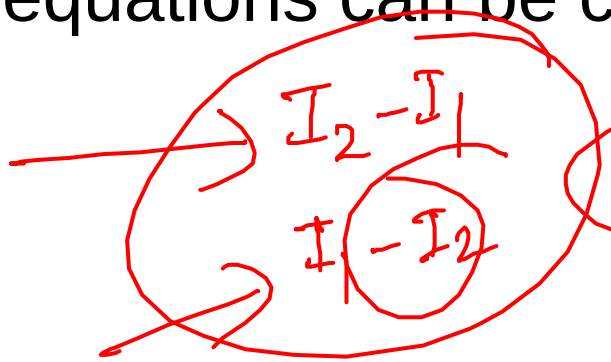
$$I_2 = -0.33 \text{ mA}$$

Finally

$$V_{out} = (I_1 - I_2)\ 1k\Omega = 3.66V$$

Matrix Notation

- The two equations can be combined into a single matrix/vector equation



$$I_1\ 2\text{k}\Omega - I_2\ 1\text{k}\Omega = V_1$$

$$-I_1\ 1\text{k}\Omega + I_2\ 2\text{k}\Omega = -V_2$$

- Find the mesh currents in the given network when the current through the branch BD is zero.

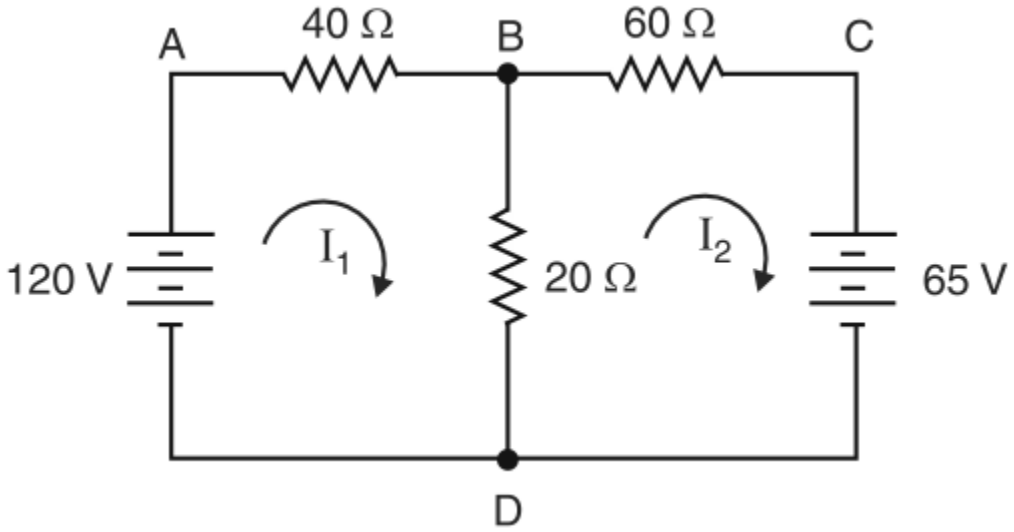
Cramer's Rule



$$60I_1 - 20I_2 = 120$$
$$-20I_1 + 80I_2 = -65$$

$$I_1 = \frac{\begin{vmatrix} 120 & -20 \\ -65 & 80 \end{vmatrix}}{\begin{vmatrix} 60 & -20 \\ -20 & 80 \end{vmatrix}} = \frac{(120 \times 80) - (-65 \times -20)}{(60 \times 80) - (-20 \times -20)} = \frac{8300}{4400} = 1{\cdot}886\ \text{A}$$

$$I_2 = \frac{\begin{vmatrix} 60 & 120 \\ -20 & -65 \end{vmatrix}}{\text{Denominator}} = \frac{(60 \times -65) - (-20 \times 120)}{4400} = \frac{-1500}{4400} = -0{\cdot}341\ \text{A}$$

Advantages of Loop Analysis

- Solves directly for some currents
- Voltage sources are easy
- Current sources are either very easy or somewhat difficult
- Works best for circuits with few loops

Disadvantages of Loop Analysis

- Some currents must be computed from loop currents
- Does not work with non-planar circuits
- Choosing the supermesh may be difficult.
